<b>4. Prepared by:</b> Matt Magorrian, USEPA, Planning Section Chief	<b>Date/Time</b> 17 Feb 2019 / 1700
---	--

<b>1. Incident Name:</b>	<b>2. Operational Period: (Date / Time)</b>	<b>INCIDENT OBJECTIVES</b> <b>ICS 202 - EPA</b>
Lindsey Lake Tanker Truck Spill	From: 18 Feb 2019 / 0700 to: 19 Feb 2019 / 0700	
<b>3. Incident Objective(s):</b>		
<ol style="list-style-type: none"> <li>1. Ensure safety of responders and members of the public</li> <li>2. Manage the response in a coordinated manner</li> <li>3. Prevent the migration of contamination</li> <li>4. Contain spilled material using hard and soft boom</li> <li>5. Recover as much product as safely possible while minimizing environmental, cultural, and economic impacts</li> <li>6. Keep the public and stakeholders informed</li> <li>7. Characterize the extent of contamination and evaluate removal options</li> </ol>		
<b>4. Operational Period Command Emphasis. (Priorities, Key Discussions/Directions):</b>		
<ol style="list-style-type: none"> <li>1. Continue to use soft and hard boom, and absorbent pads to collect as much spilled material as possible</li> <li>2. Maintain boom placed in Lindsey Lake and stop the spread of contamination to the lake during flushing operations; reposition as necessary.</li> <li>3. Add additional hard boom near the south outfall</li> <li>4. Add anchor to booms located in Lindsey Lake</li> <li>5. Use water flushing to wash roadway and drainage ditch to mobilize spilled diesel and use a vacuum-truck to recover fuel</li> <li>6. Characterize the extent of contamination and evaluate removal options</li> <li>7. Notify Unified Command immediately with any of the following critical information: <ol style="list-style-type: none"> <li>a. If there are any rushes or surges of product to the road surface or lake</li> <li>b. Sheen is observed outside of the primary containment zone</li> <li>c. Contaminated, injured, or dead wildlife</li> <li>d. Any responder requires more than simple first-aid treatment</li> <li>e. Any wrecks or accidents along the roadway (whether related to the incident or not)</li> <li>f. Any VIP, elected officials, or media are observed in or near any of the work areas</li> </ol> </li> </ol>		
<b>5. General Situation Awareness (Safety bullets, Weather, etc...):</b>		
<p>***Full-face respirators must be worn when working in areas where total VOC samples are observed to exceed 10ppm***</p> <p>All workers and people in any areas of contamination must be in at least Level-D PPE and increase to Level-C as necessary.</p> <p>Workers should dress warmly, and monitor self and peers for symptoms of hypothermia. Given the extra layers of clothing, workers should properly hydrate throughout the day to avoid dehydration.</p> <p>Roadway surfaces, lake banks, and wetlands are wet, icy and/or covered in snow; there are a number of very slick rocks. Workers should be mindful of very slippery conditions and avoid slips, trips, and falls.</p> <p>Light flurries are expected throughout the day, but no accumulation is expected.</p>

<b>7. Work Assignments:</b>					
<p>Commence flushing and recovery operations once traffic control has been established in westbound travel lane. Follow OWRD regulations while drafting water (up to 100,000 gallons) from Lindsey Lake, including use of protective screen to minimize harm to fish and wildlife. Ensure recovery equipment is in place at collection point prior to beginning any flushing operations. Utilize water tender to flush snow, ice, and accumulated diesel fuel from embankment. Simultaneously employ skimmer and/or vacuum truck to recover any fuel or oily water that then accumulates at collection point at Lindsey Lake. Employ best tactics to maximize recovery of oil and minimize recovery of water. Decanting not permitted unless allowed by FOSC. Vacuum truck should be on standby at ODOT weigh station before flushing commences. Transport any diesel fuel or oily water recovered to Baker tank staged at Wyeth State Park. If time permits, utilize long-reach crane to recover any stockpiled solid waste (sorber or sorber boom) from Lindsey Lake shoreline to waiting tub truck. Dispose of solid waste in accordance with all applicable Federal and State regulations.</p> <p>Check and maintain soft boom and replace if needed along shoreline.</p> <p>Install a cut trench mid-slope, approximately 1-2 feet and fill with absorbent boom.</p> <p>Deploy additional boat to the lake to assist with on-water recovery of contaminants.</p> <p>Dig a ditch at the base of the cliff adjacent to the eastbound lanes, approximately 1-foot deep; install absorbent boom to collect melting contamination</p>					
<b>8. Special Instructions:</b>					
<p>PFDs are to be worn at all times, while on or within 10' of water (including ice covered water). Crews should be very aware of low water temperatures. Employ the buddy system while on or near the water. Immediately report any sighting of dead or injured fish or wildlife to supervisor. Be cautious of slippery slopes and rocky terrain. ***Full-face respirators with Super defender cartridges MUST be worn when working in areas that exceed 10ppm total VOC***</p>

<b>1. Incident Name:</b>		<b>2. Operational Period: ( Date / Time )</b>		<b>RESOURCES AT RISK SUMMARY</b> <b>ICS 232-OS</b>
Lindsey Lake Tanker Truck Spill		From: 18 Feb 2019 / 0700 to: 19 Feb 2019 / 0700		
<b>3. Environmentally-Sensitive Areas and Wildlife Issues</b>				
<b>Overall Objectives of Response – (#1) Safety of public and responders, (#2) Contain and recover diesel fuel against shoreline at seepage point, (#3) Protect wetlands and natural resources in Lindsey Lake and Lindsey Creek, (#4) Prevent fuel from moving into Columbia River</b>				
<b>Site #</b>	<b>Priority</b>	<b>Site Name and/or Physical Location</b>	<b>Site Issues</b>	
Hwy MP 53.8 Columbia River Mile 158.8	1	Lindsey Lake (AKA Lindsey Pond) Source Control – Install containment boom against shoreline in area of product seepage, line with adsorbent boom to capture oil and keep oil out of lake. Replace sorbent boom as indicated by rate of oil saturation.	<b>Length:</b> 400' Boom – B2 (Contractor Boom) or equivalent. Sweeps or sorbent boom backing B2 to adsorb oil until small skimmer or vacuum truck can be placed/operated. <b>Objective:</b> Containment & Recovery – Keep oil contained to limit impacts to Lindsey Lake. <b>Resource concerns:</b> Sensitive nesting species, waterfowl and salmon concentrations and habitat.	
B 158.8L	2	Lindsey Lake (Cascade Locks, OR)	<b>Length:</b> 300' Boom – B2 (Contractor Boom) or equivalent. <u>Use 100' in "V" shape within Lindsey Lake at culvert through railway levee.</u> Use additional 200' of boom in "V" shape in Columbia River on opposite side of levee as secondary containment for river. <b>Objective:</b> Exclusion – Keep oil in Lindsey Lake from reaching Columbia River by blocking outfall/inlet to lake. <b>Resource concerns:</b> Sensitive nesting species, waterfowl and salmon concentrations and habitat. <b>Fish passage must be maintained by keeping boom at distance from passage culvert.</b>	
<b>Narrative</b>				
<p><b>Habitat Concerns:</b> Islands, sloughs and wetlands provide critical resting and feeding areas for wildlife and serve as important rearing areas for resident fish and juvenile salmonids. Various deep and shallow water river habitats support a reported 48 species of freshwater fish including species important to sport fishery such as trout, walleye, bass, sunfish, catfish and sturgeon. Additionally, numerous other small generally shallow water species such as dace, shiner, mosquitofish stickleback and sculpins occur here and serve as important food sources for birds, larger fish and other wildlife. Their occurrence in shallow water makes them more susceptible to the toxic effects of petroleum. Riparian habitats are heavily used by wildlife including river otter, beaver and raccoon.</p> <p><b>Wildlife Concerns:</b> This area is located on a major artery of the Pacific Flyway used primarily in October through February. Large numbers of waterfowl present, Pied-billed Grebe, Double-crested Cormorant, Canada Geese, Blue, Green, and Cinnamon Winged Teal, Mallard, Gadwall, Northern Shoveler, Redhead, ring-necked Duck, Lesser Ruddy Duck, Common Merganser, Lesser Scaup, Bufflehead, American Wigeon, Ring-billed Gulls, American Coot, Blue Herons and American White Pelicans are common in Fall. Bald Eagles are in the area and will prey on injured waterfowl. River otters, mink and beaver are present and vulnerable to oil exposure.</p> <p><b>Fish Concerns:</b> Sloughs and impoundments are critical rearing habitat for both salmonids and resident fish. Adult and juvenile Fall Chinook, Coho and Steelhead runs are passing through the area in September and early October. Overwintering juvenile Coho and Chinook will be using the nearshore and backwater areas.</p> <p><b>Threatened &amp; Endangered Species Concerns:</b> Listed stocks include: Upper Columbia River Spring [FE], Snake River Spring, summer, and Fall Chinook [FT], Snake River Sockeye salmon [FE] and upper Columbia River steelhead [FT], Snake River Steelhead [FT]. American White Pelican [SE]</p> <p><u><b>Juvenile coho, winter steelhead, and Redband trout are present in Lindsey Creek which enters Lindsey Lake (pond) at natural delta to west of spill seepage front on bank against the highway.</b></u></p> <p><u><b>Report any observations of impacted fish, waterfowl or other wildlife to Operations Section Chief, ODFW (Jon Germond @ 503-947-6088) and USFWS (Mike Szumski @ 541-867-4550) immediately upon discovery.</b></u></p>				
<b>4. Archaeo-cultural and Socio-economic Issues</b>				
<b>Site #</b>	<b>Priority</b>	<b>Site Name and/or Physical Location</b>	<b>Site Issues</b>	
N/A	1	Sensitive tribal cultural sites	To be identified through consultation with local tribes and the <b>Oregon State Historical Preservation Office</b> . Initial consultations with SHPO and all four Federal treaty tribes with interests in the region indicated no resources are present in the immediate vicinity of the site; see below. Notifications to the tribes and SHPO were made between 2/12/19 and 2/13/19.	
B-155.7L and others	1	Tribal fishing sites (numerous along Oregon shoreline) from site to Bonneville Dam	Fishing from scaffolds along the river and use of In-Lieu Sites (such as the Wyeth In-Lieu Site at RM 155.7L) have the potential for impacts from river operations (including boat launching with permission) during the response. CRITFC has been notified and continues on the response in a liaison capacity.	

N/A	2	Columbia River Gorge National Scenic Area	Scenic, cultural, recreational, and natural resources. Coordination with CRGNSA initiated. Office closed due to inclement weather, left message with explanation of resource protection efforts and to call back with any questions or information (541-308-1700)
B-145.4-N	2	Bonneville Dam Fishway and USACE assets in area	Fishery resources. Notification to USACE made 2/11/2019
N/A	2	Bonneville State park, Bonneville, OR	Public recreation. Notification to Oregon State Parks made 2/12/2019
B-146.2L-N	2	Cascade Hatchery (Eagle Creek Hatchery) USFWS Facility	Notification to manager <del>503-801-3713</del> (advisory notification completed) 541-867-4550
B-150.8L-N	2	City of Cascade Locks Water Intake	Call Public Works Foreman at 541-386- <del>2711</del> 2616 (advisory notification completed via Sheriff's Emergency Line)
N/A	2	Oregon State Parks Department	Contact with OR State Parks made 2/12/2019 (Gary Curtis 541-388-6204)

#### Narrative

Numerous culturally sensitive areas exist along the shorelines of the region. Tribal notifications have been made and coordination with Columbia River Intertribal Fisheries Commission and the Oregon State Historic Preservation Office is ongoing. Dennis Griffin with OR-SHPO has stated that there are no known archaeological sites in the response area. Advises to proceed, with due caution for unknown resources. See Inadvertent Discovery Plan for Cultural Resources, attached with this document.

RESOURCES AT RISK SUMMARY

ICS 232-OS

## Weather Report for 2/18/2019

### Monday Forecast

Sky/weather.....Mostly cloudy. Occasional flurries or light snow. Little or no snow accumulation.  
 Chance of pcpn.....30 percent.  
 Max temperature.....Around 35.  
 Min humidity.....Around 75 percent.  
 Dewpoint.....Around 25.  
 Surface winds.....East winds 4 to 8 mph. Gusts to 15 mph.  
 Visibility.....3 to 5 miles.

### EXTENDED OUTLOOK...

TUESDAY...Mostly cloudy. Chance of snow in the morning, then rain or snow likely in the afternoon. Snow accumulation of up to 1 inch. Highs 35 to 40. West wind 5 to 10 mph, increasing to 10 to 15 mph with gusts up to 30 mph in the afternoon. Chance of precipitation 70 percent.

TUESDAY NIGHT...Rain. Snow level 1000 feet. Lows around 35. West wind 10 to 15 mph with gusts up to 30 mph. Chance of precipitation 90 percent.

WEDNESDAY...Rain showers. Snow level 1000 feet. Highs around 40. West wind 7 to 12 mph with gusts up to 25 mph. Chance of precipitation 90 percent.

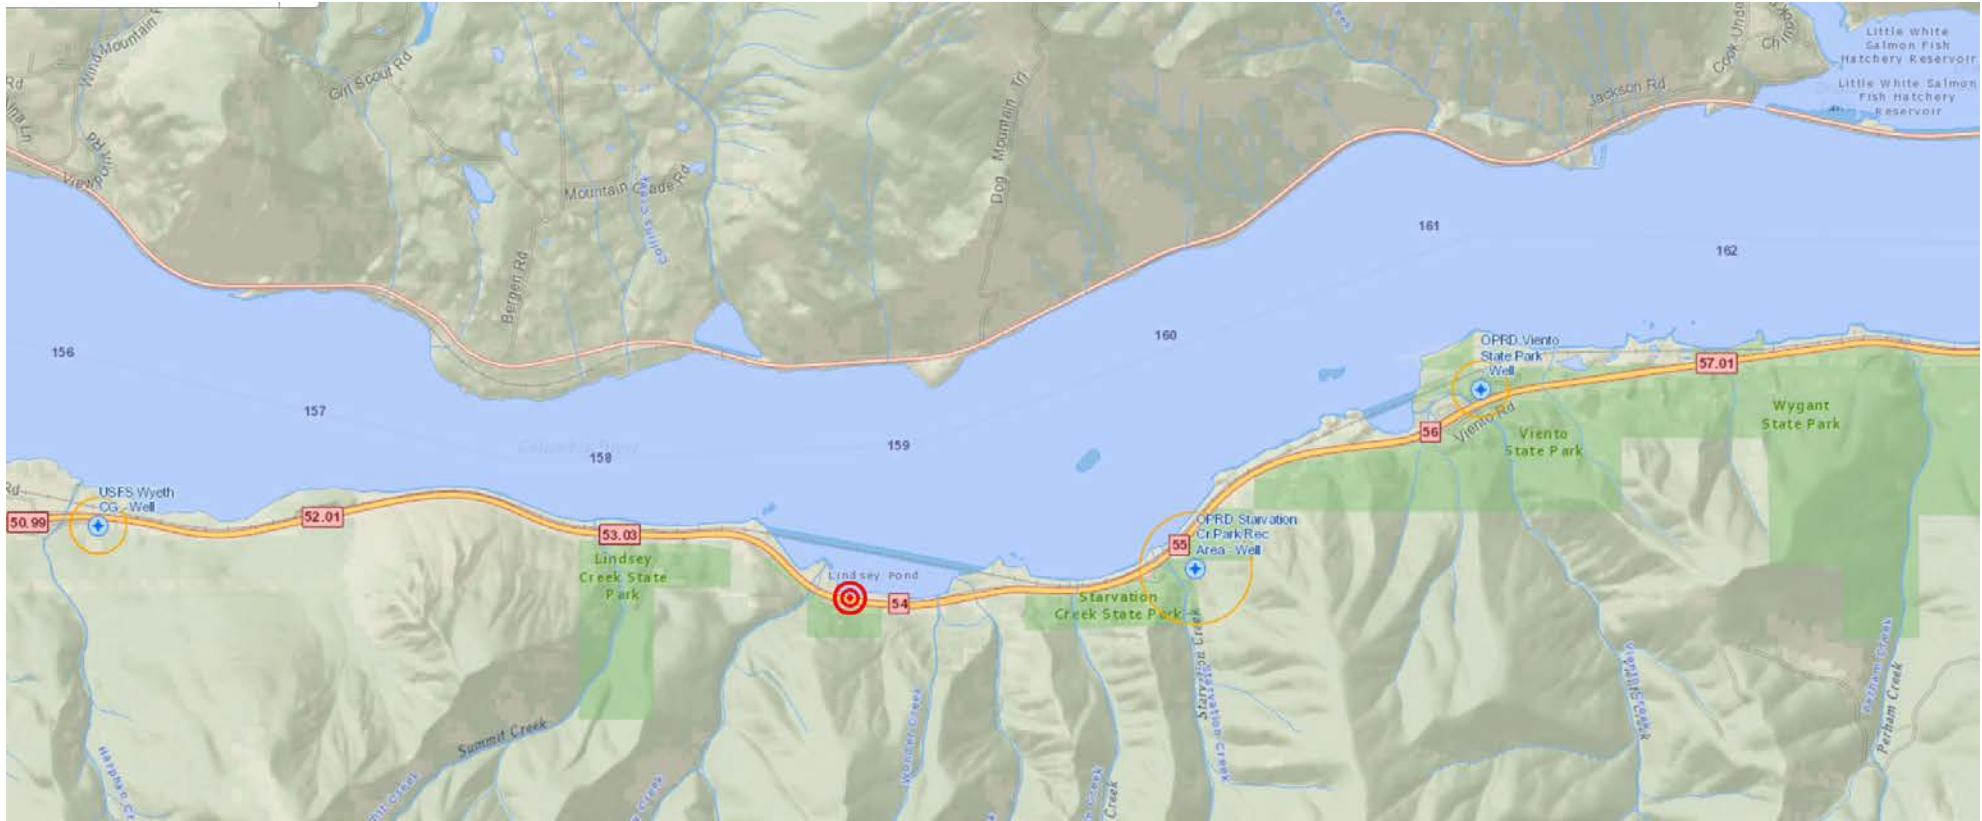

WEDNESDAY NIGHT...Cloudy with a 50 percent chance of snow showers. Lows around 25. West wind 4 to 8 mph, becoming east after midnight.

THURSDAY...Partly sunny with a 20 percent chance of rain and snow showers. Highs around 40. Northeast wind 3 to 6 mph.

THURSDAY NIGHT...Partly cloudy. Lows around 25. East wind 2 to 5 mph.

FRIDAY...Partly cloudy with a 20 percent chance of snow. Highs 35 to 40. East wind 5 to 10 mph.

## Long-term drilling plan

HydroCon is currently preparing a Scope of Work for your review to advance exploratory soil borings along the Northern ROW of westbound I-84. Following completion current bank washing, snow melt, and trenching product recovery activities. At least 10 borings along a 500' stretch of Northern ROW of the west bound lanes of I-84 to assess soil and groundwater conditions in the spill area. If subsurface conditions are favorable we will install 4" diameter wells with screened intervals selected to intercept groundwater and facilitate product recovery. If free product is detected a vacuum truck will be used for total fluids recovery. Vacuum enhanced product recovery will continue as needed to reach cleanup goals (Honberger, 2/17/2019)

## **Inadvertent Discovery Plan for Cultural Resources**

For the duration of the response, or until replaced by an updated version, this plan will be followed to identify, report and protect potential cultural materials which are discovered during the course of emergency response operations being conducted to protect human health and the environment. This does NOT include significant ground disturbing activities involving excavation, dredging, drilling, etc. which would be covered by a project specific plan. This plan also is also not intended to protect sites in areas where cultural resources have already been documented which should have site-specific project plan to protect cultural resources.

**This Inadvertent Discovery Plan (IDP) should be followed if cultural materials, including human remains, are encountered during any field or site activities including but not limited to: excavation, berming, under/overflow dam construction, boom deployment, development of staging areas, access paths/routes, or during reconnaissance activities such as SCAT Surveys.**

### **When to stop work:**

Construction work or other ground disturbing activities may uncover previously unidentified Native American or Euro-American artifacts. Work must stop when the following types of artifacts and/or features are encountered:

#### ***Native American artifacts may include (but are not limited to)-***

- Flaked stone tools (arrowheads, knives scrapers etc.);
- Waste flakes that resulted from the construction of flaked stone tools;
- Ground stone tools like mortars and pestles;
- Layers (strata) of discolored earth resulting from fire hearths. May be black, red or mottled brown and often contain discolored cracked rocks or dark soil with broken shell;
- Human remains;
- Historical structural remains- wooden beams, post holes, fish weirs.
- Petroglyphs (carvings in stone) or petrographs (drawings in stone).

#### ***Euro-American artifacts may include (but are not limited to)-***

- Glass (from bottles, vessels, windows etc.);
- Ceramic (from dinnerware, vessels etc.);
- Metal (nails, drink/food cans, tobacco tins, industrial parts etc.);
- Building materials (bricks, shingles etc.);
- Building remains (foundations, architectural components etc.);
- Old Wooden Posts, pilings, or planks (these may be encountered above or below water);
- Remains of ships or sea-going vessels, marine hardware etc.;
- Old farm equipment may indicate historic resources in the area.
- Even what looks to be old garbage could very well be an important archaeological resource;

## ***When in doubt, call it in!***

### **Protocol for coordination in the event of inadvertent discovery:**

- In the event of an inadvertent discovery of items suspected to be cultural materials, including possible human remains, stop all work immediately in the vicinity of the find. Notify your Division/Group Supervisor or Task Force Leader as soon as possible.
- The area should be secured and protected. A 30 meter buffer should be placed around the discovery with work being able to proceed outside of this buffered area unless additional cultural materials are encountered.
- The Operations Section Chief, the Planning Section Chief, the Tribal On-Scene Coordinator (if one has been established within the ICS) and the Liaison Officer are to be notified immediately by the Division/Group Supervisor or Task Force Leader. The Planning Section Chief will direct his staff to notify the State Historic Preservation Office (SHPO) and the US Dept. of the Interior or designated representative (U.S. Fish & Wildlife), if present within the ICS established for the incident.

**If possible human remains are encountered, the Oregon State Police, Oregon Commission on Indian Services (CIS), SHPO, and appropriate Tribes will also be notified.**

- Oregon State Police: Chris Allori 503-731-4717
- Oregon Commission on Indian Services: Karen Quigley 503- 986-1067
- Appropriate Tribes: As designated by CIS
- SHPO: Dennis Griffin 503-986-0674, John Pouley 503-986-0675, or Matt Diederich 503-986-0577.
- No work may resume within the secured area until consultation with the SHPO has occurred and a professional archaeologist is able to assess the discovery.
- If human remains are encountered, do not disturb them in any way. *Do not call 911*. Do not speak with the media. Secure the location. Do not take Photos. The location should be secured and work will not resume in the area of discovery until all parties involved agree upon a course of action.
- A professional archaeologist may be needed to assess the discovery; they will consult with SHPO and appropriate Tribal Governments to determine an appropriate course of action.
- Archaeological excavations may be required after the emergency response phase of the incident. This is handled on a case by case basis by the professional archaeologist and project manager, in consultation with SHPO and appropriate Tribes.

### **Proceeding with Construction or other Ground Disturbing Activities**

- Construction can proceed only after the proper archaeological inspections have occurred and
- clearance to proceed is obtained. This requires close coordination with SHPO and the Tribes.
- After an inadvertent discovery, some areas may be specified for “**Close Monitoring**” or “**No Work Zones**”.
- Any such areas will be identified by the professional archaeologist, and relayed to the Operations Section Chief and the Planning Section Chief, who will relay to appropriate Division/Group Supervisors and/or Task Force Leaders.

- In coordination with the SHPO or professional archaeologist, the Operations Section Chief will verify these identified areas and be sure that the areas are clearly demarcated in the field, as needed.
